

HOW DO YOU KEEP PRIVATE DATA WHERE IT IS SUPPOSED TO BE... INSIDE YOUR COMPANY

Unless you lock it in a vault with no access to the Web, email, employees, remote workers, customers and mobile devices your company is at risk of lost, stolen or corrupt data. Along with those risks, comes the negative public exposure due to compliance regulations, fines, lost customers and productivity. By deploying a multi-layer approach to data security with appropriate security controls where data is stored, in-transit, or used, your company can mitigate risks and ensure that your company's data stays inside your company and you stay out of the news.

HOW MANY WAYS CAN DATA LEAK OUT OF YOUR BUSINESS

As long as data and people are mobile, there will be many ways for critical or private data to leak outside of your organization. The solutions necessary for your business will vary depending on how your business operates.

Threat Source	Locations	Dangerous Activities	Solutions
<ul style="list-style-type: none"> ➤ Hackers ➤ Insiders ➤ Mobile Workers ➤ 3rd Parties 	<ul style="list-style-type: none"> ➤ Inside Company ➤ Remote Office ➤ Travel 	<ul style="list-style-type: none"> ➤ Web Surfing ➤ Email / IM ➤ Transfer Data <ul style="list-style-type: none"> ➤ Wireless ➤ Removable Media ➤ Storing Customer Private Data <ul style="list-style-type: none"> ➤ eCommerce ➤ Record Keeping 	<ul style="list-style-type: none"> ✓ DLP- Mail/IM ✓ Encryption ✓ Device Control ✓ 2-Factor Authentication ✓ Firewalls (App, GW) ✓ Web Security ✓ Process/Policies

SOLUTIONS

While many solutions like firewalls and web security are part of “best practices security”, others like DLP for mail or IM and encryption depend on your key assets, IT infrastructure, people, processes, industry and compliance needs. For every threat and risk profile, there are solutions that will increase your security so that your management team can sleep at night.
