

New Cloud based Security Solutions are Secure, Scalable & Affordable

eSecurityToGo is ready to provide the next generation of industry leading secure, scalable, affordable cloud based security solutions to its customers. We have an expanding line of Cloud based security Solutions with optional expert managed services so that customers can deploy nearly any security solution with a minimal of impact to their business and a higher level of security. Our solutions now cover all major areas of security including managed firewall services, endpoint anti-malware, onsite/offsite backup, mail, Web, 2-factor access control, IPS and PCI scanning. These solutions use the cloud to provide one or more of the following functions: management, security, storage, or reporting. These solutions also have the benefit of using the pay-as-you-going billing model for lower up-front costs and level predictable payments.

Our philosophy is not only to provide a complete line of cloud and on-premise security solutions, but also to provide optional managed services so that customers don't have to worry about whether products are configured and maintained properly. These cloud solutions complement our multi-vendor line of security products and traditional onsite & phone services.

Cloud Security

With the advent of high speed, ubiquitous internet, it is now possible to deliver most security solutions in a more secure, scalable and affordable way from the cloud. Cloud-based solutions provide these benefits due to the fact that functions such as management, filtering, reporting, data storage and disaster recovery can be hosted offsite. Therefore, customers don't have to use or create onsite infrastructures and maintain them in order to secure their data. Using 3rd party SAS 70 certified infrastructures is inherently more scalable, more secure and has a lower total cost of ownership (TCO).

Customers

These solutions are perfect for small businesses, remote offices and larger businesses that want to fast deployment and less security overhead. On-site, on-premise solutions often require the availability of advanced, stable Windows servers, software installation, advanced configuration and ongoing maintenance. The ability to quickly install and configure security solutions managed and maintained from the cloud can enable businesses to be more secure with less cost and overhead.

Expanding Line of Products		Cloud Based	Managed Services?	Pay-as-you-Go Subscriptions ⁶
FIREWALL	✓ Managed Firewall Services	Yes ¹	Yes	Annual
ENDPOINT AV+	✓ Trend Micro WFBS ✓ McAfee SaaS Endpoint	Yes ²	Opt.	Yes
BACKUP	✓ Cloud+ Backup Onsite/Offsite Data Backup	Yes ⁴	Opt.	Yes

WEB	✓ McAfee SaaS Web	Yes ²	Opt.	Yes
PCI	✓ PCI	Yes ¹	Opt.	Yes
ACCESS CONTROL	✓ 2-Factor Authentication	Yes ³	Opt.	Yes
IPS	✓ Intrusion Prevention	Yes ²	Opt.	Yes

¹ Deploy, Manage, Report

² Deploy, Manage, Filter, Report

³ Deploy, Manage, Authenticate, Report

⁴ Deploy, Manage, Store, Disaster Recovery, Report

⁵ Deploy, Manage, Filter, Store, Disaster Recovery, Report

⁶ Pay-as-you-Go Flex billing solutions provide Monthly, Quarterly and Annual payment options

Benefits of Cloud (SaaS) Security
Secure, Scalable, Affordable
Fast Cloud-based Deployment
Easier to Manage
More Secure
Scalable
High Availability
Lower Total Cost
Lower/Zero Maintenance Cost

Pay-as-you-Go

Virtually all of eSecurityToGo’s Cloud solutions offer pay-as-you-go Flex-Security Subscriptions. As with utility, and internet services, customers can choose from monthly, quarterly and annual billing plans. Licenses and provisioning is provided quickly by eSecurityToGo and adding or deleting licenses, users or resources is easy and painless with virtually no minimums.

Pay-as-you-Go Flex Subscriptions
Instant Licenses (Fast Account provisioning)
Pay-as-you-Go Billing (mo., qtrly, Annual plans)
No (or Low) minimum License Quantities
Add / Delete Licenses as needed

Optional Managed Services

Customers can now take advantage of eSecurityToGo expert managed security services for almost all security areas. These services provide customers with peace of mind and reduces their up front and ongoing workload. These managed services are offered optionally for most Cloud security solutions and for many gateway security solutions such as managed firewall services. Managed services for cloud based security can be provided for data backup, endpoint security, email, archiving, IPS, 2-factor access control and PCI. Solutions include security planning, installation and configuration, monitoring, maintenance, reporting and compliance support.

Optional Managed Services	
Expert level services – Securing your Precious Data
